

# React Application

👉 Project name hamesha small letters me rakho

(Always in small characters)

---

## ◆ Old Way (Create React App)

1. Make any folder and open **that folder with Terminal** open karo

Command run karo:

```
npx create-react-app projectname
```

- 2.

Project folder me jao:

```
cd projectname
```

- 3.

React app start karo:

```
npm start
```

Karne me kuch esa aaega copy karo es link ko browser me open karo

```
You can now view class3 in the browser.
```

```
Local:          http://localhost:3000
On Your Network: http://192.168.29.145:3000
```

```
Note that the development build is not optimized.
To create a production build, use npm run build.
```

---

## ◆ New Way (Vite – Fast & Recommended)

Terminal me command likho:

```
npm create vite@latest
```

- 1.
2. **Enter** press karo
3. Framework choose karo → **React**
4. Variant choose karo → **JavaScript (JS)**
5. Project ka naam enter karo

Dependencies install karo:

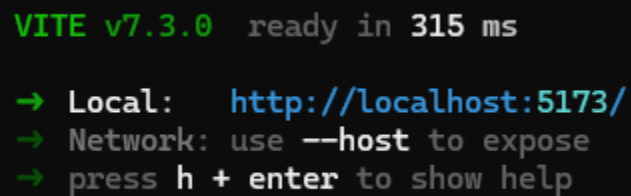

```
npm install
```

6. *(node\_modules install hoga)*

Development server run karo:

```
npm run dev
```

Karne me kuch esa aaga copy karo es link ko browser me open karo

```
VITE v7.3.0 ready in 315 ms  
→ Local:   http://localhost:5173/  
→ Network: use --host to expose  
→ press h + enter to show help
```
